

WEBSITE HOSTING HOW CAN IT BE GREEN & ETHICAL?

Webarchitects is a long established social enterprise and co-operative, an ethical, responsible business with strong values and high standards. We're down-to-earth, with real humans to speak to.

We especially welcome enquiries from activist groups, charities and progressive campaigns.

Our Sheffield datacentre is powered by Good Energy's 'green' electricity. We also offer encrypted GNU/Linux virtual servers and webhosting in Iceland, where the whole island runs on sustainable geo-thermal and hydroelectric power, free from atmospheric CO2 emissions and the potential hazards of nuclear power.

We specialise in providing high security green hosting and virtual servers using free libre/open-source software.

Fast, reliable virtual private servers, powered by 100% renewable energy running on ultra-efficient servers.

We offer systems administration and co-location for all websites from the very small to the international.

We can help with all aspects of website design/development, from domain name registration to email to new website builds, redesigns and upgrades.

We can advise on collaboration tools like encrypted and open discussion lists and social networks to help people to work together.

Software installation, modification and content management systems like WordPress, Drupal & GetSimple

Server design, support & maintenance.

Expert advice on tight data security, safe from viruses and snooping.
